

Beal School  
Construction Site

During the water distribution system flow testing, residents within the shaded area may experience brief periods of reduced pressure or discolored water. This testing is necessary due to the installation of a temporary water main to allow for the reconstruction of Lake Street as part of the Beal School project.

**IMPORTANT NOTICE: Flow testing of the water distribution system will be conducted on Lake Street between the construction site of the Beal School and Hylair Drive on Friday, October 11, 2019, between 8:00AM and 12:00PM.**
